Travis County 2025 Election Precinct Changes: Review and Requested Corrections

Subject: the county election precinct plan the Travis County Commissioners Court adopted on December 4, 2025 (287 precincts to 308), and how that plan was carried into the voter registration data
County: Travis County, Texas
For: Travis County Tax Office, Voter Registration Division; Travis County Clerk, Elections Division; and the Travis County Commissioners Court
Date: November 8, 2026
Prepared by: Daniel M. Teal, dan@teals.org

What is requested. Section 2 is a register of every record that needs investigation or correction, with its count, the section of this report that establishes it, and the itemised list in the companion supplement. The adopted precinct map itself is not in question: all 308 precincts are contiguous, the published shapefile matches the live county service, and the county's own address data follows the map in 99.91% of cases. What needs attention is how that plan was carried into the published registration data, together with three size and population questions the new plan raises for the Commissioners Court under Texas Election Code Chapter 42.

Why the precincts changed. The 89th Legislature passed new congressional districts in a 2025 special session. Texas Election Code §42.005(a) forbids a county election precinct from containing territory from more than one congressional district (and likewise more than one state senate, state house, commissioners, justice of the peace or State Board of Education district), so new congressional lines force a county to redraw its election precincts. The Commissioners Court adopted the new plan unanimously on December 4, 2025, on Commissioner Travillion's motion "to approve the election precinct boundaries proposed plan for 2025, which includes the additional change to precinct 100 and precinct 108, as included in the backup," with the proviso that if the Supreme Court made the 2021 congressional map operational for 2026 the county would revert to the 2021 precincts. The 2025 map stayed in effect, and the new precincts took effect January 1, 2026 under §42.033(a).

Data. This review uses only the county's own published data and public records:

- the adopted precinct shapefile and the 308 per-precinct PDF maps from the Travis County Voter Registration Division, with the December 4, 2025 Commissioners Court backup and transcript;
- the county's ArcGIS services at `taxmaps.traviscountytx.gov` — the live `Precincts` layer, the `AdMas` address master (412,053 address points), `VotingAddresses`, `UnregisteredAddresses`, `Splits` and `Parcels` (373,683 appraisal-district parcels);
- Travis County voter registration lists from October 2024 through October 20, 2026, including the Official Lists of Registered Voters (OLRV) generated by the state's TEAM system (provided October 27, 2026);
- the county's November 3, 2026 general election (G26) voter rosters;
- 2024 Census TIGER water and road layers, used only to describe what lies inside a precinct.

Privacy. Voters are identified only by VUID (state voter identification number). No voter names or dates of birth appear here, and no voter is linked to a street address. Street addresses in this report are property-level facts taken from the county's published address master, the appraisal district's parcel records and the Commissioners Court's own maps.

Companion files. The record-by-record correction detail is in **Travis_County_2025_Precinct_Change_Review_2026-11-08_Supplement.md**, which is organised by the kind of correction needed and names the specific VUIDs, addresses and layers in each case. Three data files accompany this report:

- `..._Records.csv` — one row per finding, with the columns `section`, `category`, `key` and `detail`. Its 1,300 records are in sections S1 through S12, listed below.
- `..._Precincts.csv` — one row per precinct, with the geometry measures, the address, parcel and registration counts and the G26 roster count used throughout this report.
- `..._Crosswalk.csv` — the 2021-to-2025 precinct crosswalk of section 9, with voter counts.

Section	Records	What it lists	Report section
S1	141	Voters whose October 20, 2026 registration precinct contradicts their address	5.3
S2	489	Voters whose October 20, 2026 TEAM OLRV precinct contradicts their address	5.4
S3	97	Addresses coded to the wrong precinct on the registration list	5.3
S4	20	Addresses whose district codes conflict with their precinct (§42.005)	6.3
S5	28	Address master points that sit inside a different precinct than they are coded to	5.5
S6	351	Address master points that fall outside every precinct polygon	5.5
S7	22	Retired 2021 precinct numbers still used in the `UnregisteredAddresses` layer	4.3
S8	93	Stale 2021 precinct numbering in the address master's `PrecinctSplit` field	4.2
S9	9	Precinct 369 voters published under an invalid precinct value	3
S10	14	Voters published in precinct "99999"	5.6
S11	13	Precincts at or under 6 registered voters (§42.010(d))	6.2
S12	23	Precincts outside the §42.006(a) 100–5,000 voter range	6.1
Total	**1,300**		

1. Summary

The adopted map itself is sound, and the county's address data follows it almost exactly.

- The shapefile published by the Voter Registration Division is the same plan as the live `Precincts` service today: 308 precincts, 1,022.7 square miles, geometry and attributes identical, no edits since February 18, 2026.
- All 308 precincts are contiguous, as §42.001 requires. None is split into disjoint pieces.
- Of the 412,053 address points in the county's address master, **411,674 (99.91%) sit geometrically inside the precinct they are coded to.** 28 do not, and 351 fall outside the precinct layer altogether, all of them within 1,000 feet of it (section 5.5).

The errors are in the registration data, not the map.

- **141 registered voters at 97 distinct addresses** were in a precinct, on the county's October 20, 2026 Voter List, that contradicts both the adopted map and the county's own address master. In **all 96 of the 96 resolvable cases** the map and the address master agree with each other and the voter list is the outlier; the remaining address has no usable geometry and is left unresolved (section 5.3).

- **125 of those 141** were in a precinct whose districts differ from the correct precinct's — 49 in the wrong congressional district, 94 in the wrong state house district, 21 in the wrong senate district, 90 in the wrong commissioners precinct and 93 in the wrong JP precinct.
- **The error reached the roster the polls worked from.** 93 of the 141 voted in G26. **84 of them appear on the official G26 roster under the wrong precinct, and 71 of those 84 were in a precinct carrying at least one different district — including 23 in the wrong congressional district.** Those 71 were very likely issued a ballot for districts they do not live in. The ballot style actually issued cannot be confirmed from the roster alone. This is the finding with the shortest window for action, and the 71 VUIDs are listed in the supplement so the county can check them against its own ballot-style records.
- The October 20, 2026 TEAM OLRV — the pollbook load of that day — has **489 voters** whose precinct contradicts the address master (section 5.4). Part of that count is unit-level ambiguity in dense student housing, but the largest clusters are the same addresses that are wrong on the county list.

Precinct 369 is the clearest single defect in the published lists — and the county had it right by Election Day.

- Precinct 369 is a 1.68-acre precinct carved out of 2021 precinct 382. It holds four single-family parcels: 5302 and 5308 Hanging Cliff Cove and 10701 and 10705 Watering Rock Lane, in ZIP 78759.
- It had 8 or 9 registered voters on every county list from February 10, 2026 through October 13, 2026, and on the September 16 OLRV and the *initial* OLRV.
- On the **October 20 county Voter List** its nine voters appear with the precinct value **"P 182.4"** — a precinct-split code, not a precinct number, naming precinct 182, which lies about 7 miles east in a different congressional, house and commissioners district. These are the only nine such malformed values in a list of 950,019.
- On the **October 20 TEAM OLRV** the same nine appear in **precinct 309**, which does not exist in the 308-precinct plan.
- Precinct 369 is therefore the **only one of 308 precincts whose G26 roster shows more voters than either published registration list**: 6 roster voters against 0 registered voters on the October 20 list and 0 on the October 20 OLRV. The six voters are fully accounted for — they were registered, they live at four identified addresses, and the roster carries them under 369. What failed is that both published lists mislabelled them.
- **The correct value reached the November election.** All six of the nine who voted appear on the G26 roster in precinct 369, so the roster the polls worked from carried the correct precinct even though both published lists did not — whether because the county corrected it or because the defect never entered that pipeline is for the county's records to show. Precinct 369 is thus a defect in the published extracts rather than in what happened at the polls. What remains to be corrected is the registration record itself and the two published files, and what remains to be investigated is how a correct value became "P 182.4" and "P 309" in the last two weeks before the election.

Nine precincts contain no residence at all, and should never show a voter.

Each contains a single placeholder address record named "FAKE PT" and **zero appraisal-district parcels** — no taxable property, so no possible residence (section 6.2):

128, 139, 147, 179, 228, 239, 249, 257, 259.

- **Precinct 239 is entirely within Lake Austin.** 25.81 acres, **100% covered by the Colorado River water polygon**, 8,155 feet long and 965 feet wide, the least compact precinct in the county (Polsby-Popper 0.050). The only road inside it is 93 feet of Loop 360 where the Pennybacker Bridge crosses.

- **Precinct 228 is the MoPac right-of-way.** 3.47 acres, 2,574 feet long and **125 feet wide** (20.6 : 1), second least compact at 0.068. Of the 4,819 feet of road inside it, 4,744 feet is Loop 1 / MoPac Expressway main lanes, between Enfield Road and Windsor Road.

The plan pushed many precincts outside the statutory size range.

- **17 of 308 precincts hold fewer than the 100 non-suspense registered voters §42.006(a) requires** — ten of them zero, and precincts 159 (1), 248 (2), 443 (3), 441 (10) and 440 (37) nearly so. Under the 2021 plan only one precinct of 287 was below 100.
- **6 precincts exceed the 5,000 non-suspense maximum**, four of them already over it when the map was drawn.
- 13 precincts are at or under 6 registered voters, the "substantially small population" §42.010(d) defines, which §42.010(b) directs the Commissioners Court to consider eliminating after redistricting.

Two county GIS layers were never migrated to the new numbering.

- The address master's `Precinct` field is current, but its `PrecinctSplit` and `Split` fields still carry **2021** precinct numbers for **32,067 address points** (7.8%). Precinct 369's nine addresses, for instance, are all coded split "382.01" (section 4.2).
- The `Splits` polygon layer still describes **287** precincts — the 2021 plan — in all 1,133 of its polygons. It was not redrawn.
- 5,203 of the 110,630 points in `UnregisteredAddresses` (4.7%) are coded to 22 precinct numbers that the 2025 plan retired.

This matters because the OLRV's precinct field is itself a split designation (`S 331.2`, `P 266`), so stale split numbering is a plausible route by which a correct precinct becomes a wrong one downstream.

2. Records that need investigation or correction

Every item below is itemised record by record — by VUID, by address, or by layer and field — in the companion supplement, and in machine-readable form in `..._Records.csv`. Counts are as published in the county and TEAM files dated through October 20, 2026 (the TEAM files were provided October 27). The TEAM file earlier called the "October 27 OLRV" is the county's October 20, 2026 pollbook load (provided October 27); this review calls it the October 20 OLRV. The last three columns give the section of this report that establishes the item, the section of the supplement that lists the individual records, and the record section in the CSV. A letter is a lettered section of the supplement; "Fix *n*" is an item in its closing "Suggested systemic fixes" list.

#	What needs correcting	Scale	Report	Supplement	Records
1	Nine registrations published under the invalid precinct values "P 182.4" and "P 309"; they belong to precinct 369	9 voters	3	G	S9
2	Voters who cast a G26 ballot from a precinct carrying at least one district other than their own, 23 of them a different congressional district	71 voters	5.3	B	S1
3	Addresses coded to the wrong precinct on the October 20, 2026 county Voter List	97 addresses, 141 voters	5.3	A	S3
4	Address records whose district codes conflict with their own precinct, the condition §42.005 forbids	20 addresses in 9 precincts	6.3	C	S4

#	What needs correcting	Scale	Report	Supplement	Records
5	Address-master points coded to a precinct their own coordinates do not fall in	28 points	5.5	D	S5
6	Address-master points that fall outside every precinct polygon	351 points	5.5	D	S6
7	TEAM OLRV precinct values that disagree with the county address master; the student-housing subset needs the county's unit-level data to resolve	489 voters at 476 addresses	5.4	J	S2
8	One corrupt OLRV split value, "0864.02", for a voter every other file places in split 308.3	1 voter	5.4	J	—
9	Registrations published in precinct "99999", including two with unusable residence addresses	14 voters	5.6	H	S10
10	`AdMas` `PrecinctSplit` and `Split` fields still carrying 2021 precinct numbers	32,067 points, 92 number pairs	4.2	E	S8
11	The `Splits` polygon layer, which still describes the 2021 plan's 287 precincts and was never redrawn	all 1,133 polygons	4.2	E	—
12	Two malformed `PrecinctSplit` values: "150" with no split number at 16336 Cameron Road, and "13.01" for the placeholder record in precinct 139	2 points	4.2	E	S8
13	`UnregisteredAddresses` points coded to precinct numbers the 2025 plan retired	5,203 points, 22 numbers	4.3	F	S7
14	Precincts outside the §42.006(a) range of 100 to 5,000 non-suspense registered voters	23 precincts	6.1	I.1, I.2	S12
15	Precincts that contain no residence at all, which §42.010(b) directs the Commissioners Court to consider eliminating	9 precincts	6.2	I.3	S11
16	Published shapefile metadata still carrying unmodified template text, and a `VoterCount` attribute now below the registered count in 294 of 308 precincts	1 file	4.4, 4.5	Fix 5	—
17	`AdMas` housekeeping: `Latitude` and `Longitude` zero in 410,070 of 412,053 records, 532 blank `County` codes, and one record coded to county 277	3 items	4.5, 5.5	Fixes 6, 7	—

Items 1 through 9 are corrections to voter records and published extracts and can be made by the Voter Registration Division and the Elections Division. Items 10 through 13 and 16 and 17 are GIS and metadata corrections. Items 14 and 15 are matters for the Commissioners Court at the review §42.031(a) sets for March or April of 2027, or earlier under §42.031(b)(2).

What is not in question. The adopted map itself holds up on every test applied here: 308 contiguous precincts, the published shapefile identical to the live `Precincts` service, each precinct carrying a single value for all six district types, and 411,674 of 412,053 address points (99.91%) geometrically inside the precinct they are coded to. No change to the adopted boundaries is requested on account of any finding in this report other than items 14 and 15, which arise from the statutory size and population tests rather than from a defect in the drawing.

3. Precinct 369: the full sequence

Precinct 369 was created by splitting 2021 precinct 382. Of 382's address-stable voters, 3,408 stayed in 382, 83 went to new precinct 368 and **8 went to new precinct 369**.

Source	Date	Precinct value for the 369 addresses
County Voter List	Oct 25, 2025	382 — correct under the 2021 plan
County Voter List	Jan 17, 2026	382 — the change not yet applied
County Voter List	Feb 10, 2026	**369** — correct
County Voter List	Jul 27 – Oct 13, 2026 (10 lists)	**369** — correct
OLRV (TEAM)	Sep 16, 2026	**369** — correct
OLRV (TEAM), initial pull	provided Oct 27, 2026	**369** — correct
County Voter List	**Oct 20, 2026**	**"P 182.4" — wrong; a split code, not a precinct**
OLRV (TEAM), pollbook load	**Oct 20, 2026**	**"P 309" — wrong; no such precinct**
G26 roster	Nov 2026	**369** — correct

Both failures appeared in the last two weeks before the election, after ten months of correct values, and both affect the same nine VUIDs (records section S9).

The roster was right. The G26 roster carries all six of the nine who voted under precinct 369, so whatever went wrong in the October 20 Voter List and the October 20 OLRV did not reach the roster the polls worked from: the county had the correct precinct for these voters for the November election. That narrows what is outstanding to three things — the registration record itself, which should read 369 on any extract taken today; the two published files, which should be reissued with the correct value; and the cause, since a value that had been correct for ten months became a malformed split code two weeks before a general election and would have mattered a great deal had it also reached the roster.

The county's own account of the OLRV files it provided on October 27, recorded in the November 5, 2026 participation review, fits this: the initial pull "was missing the voters of two precinct splits" and "included voters with incorrect splits, whom the county removed," and the current version "still showed about 200 voters with the incorrect split, whom the county was updating by hand." Precinct 369 came from a precinct split, and the wrong value published for it on October 20 is literally a split code — 182.4.

Neither wrong value is a near-miss for 369. Precinct 182 exists in both the 2021 and 2025 plans (2021 precinct 182 became 182 and 188); its centroid is about 7 miles east of precinct 369, in congressional district G10 rather than G37, house district L50 rather than L47, and commissioners precinct P01 rather than P03. Precinct 309 does not exist at all: the 2025 plan runs 308 then 311. Both values therefore point away from precinct 369's actual districts, which is why the 49 wrong-district counts in section 5.3 include all nine of these registrations.

The four parcels inside precinct 369, from the county's `Parcels` service:

Appraisal property	Address	ZIP	Land use	Acres
156309	5302 Hanging Cliff Cv	78759	A1 single family residence	0.36
156310	5308 Hanging Cliff Cv	78759	A1 single family residence	0.28
156311	10701 Watering Rock Ln	78759	A1 single family residence	0.17
156313	10705 Watering Rock Ln	78759	A1 single family residence	0.23

The address master puts nine address points in precinct 369 — those four plus 5300 and 5306 Hanging Cliff Cove, 10703 Watering Rock Lane and 10725 and 10727 Floral Park Drive. Only four whole parcels have their centroid inside the precinct, so the 369 boundary cuts between lots rather than following lot lines. All nine points are coded `PrecinctSplit` 382.01.

4. The adopted plan

4.1 What changed

Intergovernmental Relations Officer Julie Wheeler told the Commissioners Court on December 4, 2025: "We are currently at 287 precincts. With these changes will go up to 308." The adopted shapefile has exactly 308.

Reconstructed from the 874,747 voters who appear on both the October 25, 2025 and February 10, 2026 county lists **at the same residential address**, so that ordinary moves are excluded (21,976 voters who moved are set aside):

	Count
2021 precincts	287
2025 precincts	308
2021 precincts unchanged (every voter kept the number)	222
2021 precincts split across more than one 2025 precinct	45
2021 precincts renumbered whole into another number	20
2021 precinct numbers retired	22
Precinct numbers first used in the 2025 plan	34
Precincts with no registered voters	9

The 22 retired numbers are 124, 125, 133, 136, 151, 175, 176, 183, 194, 202, 224, 247, 263, 265, 302, 310, 373, 393, 412, 422, 431 and 461. The Commissioners Court backup `2021_Precincts_Changing.csv` lists 92 precincts as changing; those 92 are the union of the 45 split, the 20 renumbered and the precincts that received territory.

Several splits produced very small precincts. The smallest shares, by voters at unchanged addresses:

2021 precinct	New precinct	Voters moved
382	**369**	8
452	**440**	38
453	**441**	11
465	**443**	3
481	**459**	3
252	**248**	2
145	**159**	1

Julie Wheeler told the court why: "It does make for some splits that are not ideal. It does make for some new precincts that aren't ideal… we really were left with a situation where we kind of had to do the best that we could within the confines of what we could actually change." Each precinct may hold only one congressional district, and the congressional lines were the only thing that moved.

The full crosswalk is in section 9.

4.2 The address master's split fields were never renumbered

The `AdMas` address master has both a current `Precinct` and a `PrecinctSplit` of the form `nnn.nn`. For 369,851 of the 412,053 points the `PrecinctSplit` prefix equals `Precinct`. For **32,067 points (7.8%) it does not**, and in every pattern checked the prefix is the point's **2021** precinct:

`PrecinctSplit` prefix (2021)	`Precinct` (2025)	Address points
124	120	2,443
194	192	2,169
393	388	1,986
431	436	1,474
461	463	1,432
224	220	1,149
373	374	1,124
474	457	1,120
133	131	1,111
151	174	1,036
… 82 further pairs		

All 92 pairs are in records section S8. They are exactly the crosswalk pairs of section 4.1, which is why this is a migration gap rather than random error. Two values are malformed outright: 16336 Cameron Road, precinct 150, has `PrecinctSplit` "150" with no split number, and the single placeholder record in precinct 139 is coded "13.01" instead of "139.01".

The `Splits` polygon layer tells the same story more starkly: all 1,133 split polygons are internally consistent, but they describe **287** precincts, not 308. The split geometry was not redrawn for the 2025 plan.

4.3 The unregistered-address layer

`UnregisteredAddresses` holds 110,630 addresses with no registered voter. **5,203 of them (4.7%) are coded to one of 22 precinct numbers the 2025 plan retired**, led by 124 (1,307 points), 393 (415), 461 (384), 194 (360) and 125 (298). The 22 numbers are in records section S7. The `VotingAddresses` layer, by contrast, has no retired precinct numbers at all.

4.4 The shapefile's VoterCount is a stale snapshot

The shapefile and the live service both carry a `VoterCount` per precinct, totalling 823,777. The October 20, 2026 list has 950,019 registered voters, of whom 812,742 are not in suspense. `VoterCount` is below the current registered count in **294 of 308 precincts**, by as much as 1,599 (precinct 312). It appears to be a non-suspense count from about the time the map was drawn. Anyone checking §42.006 compliance from the shapefile alone would be working from numbers that are now a year stale — and four precincts (126, 464, 138, 483) already exceeded 5,000 by that measure when the plan was adopted.

4.5 The shapefile carries no address data; the county's other layers do

`Election_Precincts.shp` carries only `Precinct`, `VoterCount` and the six district codes — congressional, senate, legislative, commissioner, JP/constable and State Board of Education — plus editor and edit-date fields. It contains no address information of any kind, and its XML metadata is an unfilled template: the abstract and purpose both still read "REQUIRED: A brief narrative summary of the data set," and the file records no effective date and no plan identification.

The county does, however, publish the address-level data on the same ArcGIS server that serves the precinct layer, and that data is what makes precinct assignment auditable:

Service	Records	What it is
`AdMas/AdMas`	412,053	the address master: every address with `Precinct`, `Split`, `PrecinctSplit`, all six districts, the appraisal `property_id` and a `CodeCat` jurisdiction string
`VotingAddresses/VA`	412,016	the same addresses in the voter-registration layout
`UnregisteredAddresses`	110,630	addresses with no registered voter
`AdMas/Splits`	1,133	precinct-split polygons, still on the 2021 plan
`Precincts`	308	the adopted precinct polygons
`Parcels`	373,683	appraisal parcels with `PROP_ID`, situs address, land-use code and values

Two usability problems in that data are worth correcting. The `Latitude` and `Longitude` *attributes* in the address master are 0 for 410,070 of the 412,053 records, so the point geometry has to be downloaded instead of those columns being read. And the address-level layers are served publicly but are not presented as downloads on the Voter Registration Maps hub's own "GIS Maps and Downloads" page alongside the precinct shapefile.

The appraisal `Parcels` layer settles the empty-precinct question on its own. Assigning all 373,683 parcels to precincts confirms that the nine placeholder precincts of section 6.2 contain no parcel at all, while precinct 369 contains four single-family parcels. The appraisal records also characterise the largest misassigned addresses: 1007 S Congress Avenue is an apartment and commercial-condominium property, state codes B1 and F4, and the four precinct 369 properties are single-family homes.

5. Precinct assignment errors in the registration data

5.1 What was compared

Three independent sources of truth exist for the precinct an address belongs to:

1. **the adopted precinct polygons** — the map the Commissioners Court ordered;
2. **the county's address master** (`AdMas`), which assigns each of 412,053 addresses a precinct;
3. **the registration lists** — the county's Voter List and the state's TEAM OLRV.

Where all three agree there is nothing to check. Where they disagree, the polygon geometry breaks the tie, because it is the adopted order.

5.2 Method and coverage

Each voter's address on the October 20, 2026 county Voter List was matched to the address master on house number, street and ZIP code, ignoring unit, since all units at one street address share a precinct. Street names were compared both literally and after stripping directional prefixes and street-type suffixes, because the registration list often records "21ST" where the address master has "E 21ST ST".

Outcome	Voters
Matched to an address master record	947,046 (99.69%)
— precinct agrees	946,905
— **precinct disagrees**	**141**
Address maps to more than one precinct (not counted either way)	1,171
Address not found in the address master	1,383
No residential address on the list	419
Total	**950,019**

Each disagreeing address was then resolved independently by taking the address master's own point geometry and testing which adopted precinct polygon contains it:

	Addresses
Adopted map agrees with the address master (the **voter list** is wrong)	96
Adopted map agrees with the voter list (the address master would be wrong)	0
All three differ, or no usable geometry	1

The adopted precinct map and the county's address master agree with each other on every resolvable case. The registration list is the outlier.

5.3 The 141 voters and 97 addresses

	Voters
In a precinct that contradicts their address	141
— whose precinct carries at least one different district	125
— — wrong US congressional district	49
— — wrong state house district	94
— — wrong state senate district	21
— — wrong commissioners precinct	90
— — wrong justice of the peace / constable precinct	93
— — wrong State Board of Education district	0
— whose precinct happens to carry the same districts	16

What happened on the G26 ballot:

	Voters
Voted in G26	93 of 141
— G26 roster shows the **wrong** precinct	**84**
— — and that precinct carries at least one different district	**71**
— — — wrong US congressional district	**23**
— — — wrong state house district	54
— — — wrong state senate district	9
— — — wrong commissioners precinct	47
— — — wrong JP / constable precinct	52
— G26 roster shows the correct precinct	9
Did not vote in G26	48

The nine whose roster entry was right are the six precinct 369 voters, two at 8000 W US 290 Highway and one at 14305 Tandem Boulevard.

The largest clusters, and the most instructive, come from **missing directional prefixes**:

Address as registered	ZIP	Voters	List precinct	Correct precinct	The confusion
8000 US 290	78736	11	131	357	ZIP 78736 is **W** US 290; precinct 131 serves **E** US 290 in 78754
7880 US 290	78736	8	131	357	same
7631 US 290	78736	8	121	357	same
3501 FM 620	78738	8	370	292	ZIP 78738 is **S** FM 620; precinct 370 serves **N** FM 620 in 78734
1007 CONGRESS	78704	4	300	411	ZIP 78704 is **S** Congress Avenue; precinct 300 serves downtown Congress Avenue in 78701

The county's address master already flags the east and north counterparts of these with its own notes — "Rogue" on 7631, 7880 and 8000 E US 290 HWY, and "Rogue. Bad address" on 3501 N FM 620 RD. The address master knows those records are suspect; the registration list still resolves voters onto them.

A further sign of inconsistency: 309 E 11th Street, ZIP 78701, carries **two different precinct values on the same list** — 410 and 430 — for two voters at the same address, while the adopted map and the address master both put it in 300.

Full detail for all 97 addresses is in records section S3 and itemised in the supplement.

5.4 The TEAM OLRV

The same comparison against the October 20, 2026 OLRV — the pollbook load of that day — gives:

Outcome	Voters
Precinct agrees with the address master	943,636
Precinct disagrees	**489**

Outcome	Voters
Address maps to more than one precinct	4,261
Address not found in the address master	1,250
Address could not be parsed	406

The OLRV error count is more than three times the county list's. The clusters match the county-list findings — split `131.3` where the address master says 357 (17 voters), `121.2` against 357 (7), `370.3` against 292 (8), `309` against 369 (9), `300` against 411 (4), `411` against 301 (4) — but a second group sits in the dense student-housing precincts around the University of Texas (308, 311, 312, 313, 314, 204, 206), where one street address can genuinely span precincts and the OLRV gives only a single free-text address line with no separate unit field. Those are flagged in records section S2 for the county to confirm, not asserted as errors here.

The OLRV also contains one precinct value that is simply corrupt: VUID 3383028111, at an address the September 16 OLRV and the initial OLRV both place in split 308.3, appears in the October 20 OLRV as split **"0864.02"**.

5.5 The county's own address master

Testing all 412,053 address points against the adopted polygons:

	Points
Inside the precinct they are coded to	411,674 (99.91%)
Coded to a different precinct than their location	**28**
Outside every precinct polygon	351

The 28 are listed in records section S5; examples are 2323, 2383 and 2803 E Martin Luther King Jr Boulevard (coded 102, located in 103), 6301 and 6303 Manor Road (coded 112, located in 116), 9701 and 9703 FM 1826 Road (coded 318, located in 360) and 6526, 6538 and 6616 W US 290 Highway (coded 351, located in 357).

None of the 351 outside points is far away: 33 are within 10 feet of the precinct layer, 168 within 100 feet and 150 within 1,000 feet. They are boundary-edge artefacts along the county line and at precinct seams, not addresses in another county. Separately, 532 address-master records have a blank `County` code, and one — the test record "51 FAKE PT" — has county code "277" instead of Travis's 227.

5.6 Precinct "99999"

The county's **October 13, 2026** Voter List places **14 voters in precinct "P 99999"**, a value that matches no precinct in any plan. This identifies the "P99999 voters" the county described when explaining the OLRV files it provided on October 27, and which the first version of the November 5, 2026 participation review could not account for. Eight of the fourteen are in suspense, and several have addresses that cannot be assigned — "8915 MISSING ADDRESS, Austin TX 78758", and an address in Fort Worth. None appears with that value on the October 20 list, and all but two have a real precinct on the October 20 OLRV. They are listed in records section S10.

6. Statutory compliance

6.1 Size — §42.006(a)

> "Except as provided by this section and Section 42.0051, a county election precinct must contain at least 100 but not more than 5,000 registered voters."

§42.006(e) excludes voters whose names carry the notation "S" (suspense), so the counts below use non-suspense registrations from the October 20, 2026 list (812,742 of 950,019).

Below the 100-voter minimum: 17 precincts. Under the 2021 plan only one of 287 precincts — 175, with 2 voters — was below it.

Precinct	Non-suspense	Registered	Address points	Parcels	Acres	G26 voters
128	0	0	1	0	1.74	0
139	0	0	1	0	5.87	0
147	0	0	1	0	3.20	0
179	0	0	1	0	0.60	0
228	0	0	1	0	3.47	0
239	0	0	1	0	25.81	0
249	0	0	1	0	11.88	0
257	0	0	1	0	3.47	0
259	0	0	1	0	1.83	0
369	0	0	9	4	1.68	**6**
159	1	1	9	11	613.56	0
248	2	2	2	2	22.31	2
443	3	3	9	9	70.19	2
441	10	11	9	8	3.53	7
440	37	40	29	0	3.80	31
368	70	94	46	52	48.54	55
229	95	104	61	61	421.87	75

Precinct 229 is worth noting: 104 registered but only 95 non-suspense, so it falls below the minimum on the measure the statute prescribes.

Above the 5,000-voter maximum: 6 precincts.

Precinct	Registered	Non-suspense	Over by	At adoption (VoterCount)
126	6,271	5,666	666	5,387
464	6,319	5,580	580	5,261
138	6,068	5,439	439	5,161
483	5,746	5,318	318	5,102

Precinct	Registered	Non-suspense	Over by	At adoption (VoterCount)
337	6,212	5,115	115	4,756
141	5,516	5,067	67	4,707

Four of the six (126, 464, 138, 483) were already over 5,000 on the county's own `VoterCount` when the plan was adopted. §42.031(a) requires the Commissioners Court to review compliance with §42.005, §42.006 and §42.007 during March or April of each odd-numbered year and order the necessary boundary changes before May 1, so the next scheduled opportunity is spring 2027; §42.031(b)(2) also permits an out-of-cycle change specifically to bring a precinct back under the maximum.

§42.0051(a) gives the county a lawful route for the small precincts: where redistricting produces precincts with fewer than 3,000 registered voters, precincts may be combined notwithstanding §42.005 "to avoid unreasonable expenditures for election equipment, supplies, and personnel," subject to the §42.006 maximum.

6.2 Precincts with no residence — §42.010

§42.010(d) defines a "substantially small population" as "a precinct with a population of not more than 10 persons or not more than 6 registered voters." §42.010(b) directs the Commissioners Court, after each redistricting of a commissioners or justice precinct, to "consider changes to the territorial units to allow the county to eliminate county election precincts with no population or a substantially small population," and §42.010(c) allows recommendations to the Secretary of State after congressional, house, senate or State Board of Education redistricting.

13 precincts are at or under 6 registered voters: 128, 139, 147, 159, 179, 228, 239, 248, 249, 257, 259, 369 and 443.

Nine of them contain no residence at all. Each holds one placeholder record whose address takes the form "*nn* FAKE PT", and **not one appraisal parcel** has its centroid inside:

Precinct	Acres	Compactness (Polsby-Popper)	Water	Parcels	What is inside	Cong.	Comm.	JP
128	1.74	0.414	0%	0	FM 969	G27	P01	J01
139	5.87	0.326	0%	0	Harris Branch Pkwy / E Howard Ln	G10	P01	J01
147	3.20	0.434	0%	0	no road at all	G10	P01	J01
179	0.60	0.360	0%	0	Dessau Rd (74 ft wide)	G10	P01	J02
228	3.47	**0.068**	0%	0	**Loop 1 / MoPac Expressway main lanes**	G37	P02	J05
239	25.81	**0.050**	**100%**	0	**Lake Austin; Loop 360 at the Pennybacker Bridge**	G10	P02	J05
249	11.88	0.268	0%	0	no road at all	G37	P02	J01
257	3.47	0.163	0%	0	E Parmer Ln / E Yager Ln (98 ft wide)	G37	P02	J01
259	1.83	0.312	0%	0	Wells Branch Pkwy / W Howard Ln	G10	P02	J02

- **Precinct 239 — Lake Austin.** The Census water polygon for the Colorado River covers 100.00% of its 25.81 acres. Its minimum bounding rectangle is 8,155 by 965 feet. The only road inside is 93 feet of Loop 360 where the Pennybacker Bridge crosses the lake. It is the least compact of the 308 precincts, and its only neighbours are 232 and 290, on opposite banks.

- **Precinct 228 — the MoPac right-of-way.** 2,574 by 125 feet, between Enfield Road and Windsor Road. 4,744 of the 4,819 feet of road inside it is Loop 1 / MoPac Expressway main lanes. Second least compact. Its neighbours are 201, 208, 230 and 231.
- **Precincts 147 and 249** contain no road and no parcel — pure interstitial slivers in the Harris Branch area.
- **Precinct 259** carries an address-master note that predates this redistricting: "Created in G23 for L02 in 255. - TM", so Travis has used placeholder precincts before.

These nine are the precincts that should never show a registered voter. Three further precincts (159, 248, 443) contain parcels but only 1 to 3 voters, and 369 contains four homes and should show about 8 or 9.

6.3 One district per precinct — §42.005

> "A county election precinct, including a consolidated precinct, may not contain territory from more than one of each of the following types of territorial units: (1) a commissioners precinct; (2) a justice precinct; (3) a congressional district; (4) a state representative district; (5) a state senatorial district; or (6) a State Board of Education district."

The adopted polygons each carry a single value for all six districts, and for every precinct the dominant district value among its addresses matches the polygon. But **20 individual address records in 9 precincts carry a district code that conflicts with their own precinct**, which is the condition §42.005 forbids:

Precinct	Addresses	Field	Address says	Precinct says
348	5 (S SH 45 W, Archeleta Blvd)	Congressional	G37	G27
349	3 (Green Emerald Ter, S MoPac Expy)	Congressional	G37	G27
351	3 (W US 290 Hwy)	Congressional	G37	G10
346	1 (S SH 45 W)	Congressional	G37	G27
123	1 (2906 S FM 973 Rd)	Senate, Commissioner, JP	N21, P04, J04	N14, P01, J01
112	2 (6301, 6303 Manor Rd)	Legislative	L50	L46
132	1 (10205 N IH 35)	JP/Constable	J02	J01
374	1 (5 Lost Meadow Cv)	JP/Constable	J03	J02
414	1 (2727 S Lamar Blvd)	Commissioner	P03	P04

12 of the 20 are congressional-district conflicts — the very requirement the redistricting was carried out to satisfy. Several of these addresses also appear in section 5.5 as points whose coordinates fall in a different precinct, which is the likely root cause: the address is coded to the wrong precinct, so its district codes no longer agree with it. The 20 records are in section S4 and are itemised for correction in the supplement.

6.4 Compactness and contiguity — §42.001, §42.003

> "The precincts must be compact and contiguous."

- **Contiguity: fully satisfied.** All 308 precincts are a single connected polygon. None has a detached piece.

- **Compactness: satisfied in general, strained in two places.** The median Polsby-Popper score is 0.515. Only two precincts fall below 0.15 — 239 at 0.050 and 228 at 0.068 — and both are the empty slivers of section 6.2. The next lowest are 257 (0.163), 305 (0.182), 190 (0.188), 326 (0.192) and 440 (0.206).

§42.003 requires each precinct to be described by natural or artificial boundaries or survey lines. Precinct 239 follows the Lake Austin shoreline and precinct 228 the MoPac right-of-way, so both have identifiable boundaries even though they enclose nothing.

7. Precincts with very few addresses

The question of small precincts has three different answers depending on what is counted, and the county's published layers give all three.

Precinct	Registered voters	Distinct addresses on the list	Address-master points	Parcels	Acres
128, 139, 147, 179, 228, 239, 249, 257, 259	0	0	1 placeholder each	0	0.60 – 25.81
369	0 (should be 8–9)	0	9	4	1.68
159	1	1	9	11	613.56
248	2	1	2	2	22.31
443	3	2	9	9	70.19
441	11	5	9	8	3.53
440	40	27	29	0	3.80
368	94	42	46	52	48.54
229	104	46	61	61	421.87
149	148	85	448	497	4,411.27
158	232	112	146	174	1,998.78
148	244	139	183	205	1,417.00
459	315	60	499	395	6,726.28
140	320	182	210	214	108.91

For comparison, the median precinct has 1,098 distinct residential addresses on the list and 2,815 non-suspense voters.

Three of these have many more addresses and parcels than voters and are therefore likely to grow quickly: **149** (448 address points, 148 voters, 4,411 acres), **459** (499 address points, 315 registered of which only 176 non-suspense, 6,726 acres, taking in the airport and the SH 71 corridor) and **158** (146 points, 232 voters). **440**, by contrast, is a 3.80-acre strip whose 29 addresses on Airedale Road have no parcel centroid inside the precinct at all, meaning the boundary runs through the backs of the lots.

Precincts 278 (681 voters at 5 distinct addresses), 303 (498 at 9) and 196 (803 at 10) are the reverse case — few addresses but many voters, because each address is a large apartment or condominium property.

8. Requested actions

Each action corresponds to one or more numbered items in the section 2 register, and the records to act on are itemised in the supplement.

1. **Confirm the nine precinct 369 registrations now read 369, and reissue the two published extracts.** The roster shows the county had the correct value by Election Day; what is requested is confirmation that the registration records themselves are correct, reissue of the October 20 Voter List and the October 20 OLRV with a valid precinct value, and a determination of how "P 182.4" and "P 309" were introduced — the first is a split code rather than a precinct number, and the second is not a precinct in the adopted plan.
2. **Check the 71 G26 voters in section B against the county's ballot-style records.** These voters appear on the G26 roster in a precinct that carries at least one district other than the one their address lies in, 23 of them a different congressional district. Whether each was issued the ballot for their own districts can be determined from the county's ballot-style and cast vote records but not from the roster alone, so this is the item on which the county's own records are needed most, and the one most time-sensitive given the canvass and any contest period. If any of them was issued a ballot for a congressional, legislative or senate district other than their own, that should be reported to the Secretary of State's Elections Division.
3. **Correct the 97 addresses in records section S3** and the 20 district-code conflicts in section S4, and review the 476 OLRV addresses in section S2.
4. **Add a directional-prefix validation rule.** The largest clusters — 8000, 7880 and 7631 US 290; 3501 FM 620; 1007 Congress — all arise from a registration address with no N/S/E/W prefix being resolved onto the wrong side of the county. The address master already flags the wrong-side records as "Rogue"; the registration system should refuse to resolve to a point the address master has flagged, and should require the prefix when the ZIP code contradicts it.
5. **Migrate the split numbering.** Renumber the address master's `PrecinctSplit` and `Split` fields for the 32,067 affected points, redraw the `Splits` polygon layer for the 2025 plan (it still describes 287 precincts), fix the malformed values at 16336 Cameron Road and in precinct 139, and recode the 5,203 `UnregisteredAddresses` points still on retired 2021 numbers. Because the OLRV precinct field is itself a split designation, stale split numbering is the most plausible mechanism for the precinct values that went wrong in late October.
6. **Resolve or retire the "99999" precinct value** and the 14 registrations that carried it, several of which have unusable addresses.
7. **Act on §42.010 for the nine empty precincts.** The Commissioners Court is directed by §42.010(b) to consider eliminating precincts with no population after commissioners or justice precinct redistricting, and may recommend changes to the Secretary of State under §42.010(c). Precinct 239 lies entirely in Lake Austin and precinct 228 entirely in the MoPac right-of-way; neither can ever contain a voter.
8. **Bring the six oversize precincts back under 5,000** at the March–April 2027 review under §42.031(a), or earlier under §42.031(b)(2), and consider combining the smallest precincts under §42.0051(a).
9. **Fill in the shapefile metadata.** The published `Election_Precincts.shp.xml` still contains the template text "REQUIRED: A brief narrative summary of the data set" and records no effective date or plan identification. Add the December 4, 2025 order date, the January 1, 2026 effective date and a plan name, and note that `VoterCount` is a point-in-time snapshot.
10. **Publish the address-level layers from the Voter Registration hub.** `AdMas`, `VotingAddresses` and `UnregisteredAddresses` are the data that make precinct assignment auditable, and they are already served publicly but are not presented as downloads alongside the precinct shapefile. Populating the `Latitude` and `Longitude` columns, which are 0 in 410,070 of 412,053 records, would also help.

9. Full crosswalk, 2021 to 2025

Voters counted are those on both the October 25, 2025 and February 10, 2026 county lists at an unchanged residential address. The 222 precincts whose voters all kept the same number are omitted.

9.1 2021 precincts split across more than one 2025 precinct

2021 precinct	2025 precincts (voters at unchanged addresses)
100	**108** (1,697), **100** (1,630)
122	**122** (2,480), **123** (1)
126	**126** (5,543), **127** (2)
127	**127** (4,270), **145** (75), **126** (1)
141	**141** (5,029), **148** (237)
142	**142** (4,197), **149** (114)
145	**145** (3,019), **158** (220), **159** (1)
173	**173** (1,515), **324** (16), **322** (14)
182	**182** (1,780), **188** (840)
191	**191** (2,107), **196** (649)
200	**200** (2,434), **208** (1,561)
213	**213** (3,385), **206** (1)
231	**231** (3,782), **229** (100)
252	**252** (2,435), **248** (2)
253	**253** (3,864), **258** (544)
256	**256** (2,406), **276** (814), **269** (4)
262	**262** (2,655), **278** (462), **261** (67)
263	**256** (2,084), **269** (1,041)
267	**267** (2,409), **285** (533), **266** (148)
268	**268** (1,945), **286** (538)
300	**300** (1,449), **308** (1,266)
307	**307** (3,738), **414** (1)
313	**313** (4,068), **308** (1)
335	**335** (2,371), **317** (1,131)
337	**337** (5,540), **322** (6)
343	**343** (1,528), **318** (1,245), **328** (134)
346	**346** (2,406), **328** (1,606)
347	**347** (2,629), **329** (679)
360	**360** (3,317), **343** (1)
376	**376** (3,809), **374** (2)
382	**382** (3,408), **368** (83), **369** (8)

2021 precinct	2025 precincts (voters at unchanged addresses)
383	**383** (2,047), **377** (1,693)
387	**378** (1,736), **387** (938)

302	300	3,906
310	308	3,981
373	374	2,179
412	410	2,274
422	423	1,889
431	436	2,965

2021 precinct	became 2025 precinct	voters
461	463	2,667

9.3 Numbers retired and numbers newly used

- **Retired after 2021:** 124, 125, 133, 136, 151, 175, 176, 183, 194, 202, 224, 247, 263, 265, 302, 310, 373, 393, 412, 422, 431, 461.
- **First used in 2025:** 108, 148, 149, 158, 159, 188, 196, 208, 229, 248, 258, 269, 276, 278, 285, 286, 308, 317, 318, 328, 329, 368, 369, 377, 378, 388, 397, 398, 440, 441, 442, 443, 457, 459.

10. Sources

Commissioners Court, December 4, 2025 (in `2025 Precincts/Commissioners Court 2025-12-04`): `Agenda Request.pdf`, `12-04-2025 SVS Transcript.pdf`, `12-04-2025 SVS Agenda Packet [Thu 11_00am].pdf`, `1 - Split Precincts.pdf`, `2 - Merged Precincts.pdf`, `2021_Precincts_Changing - updated 251203.pdf`, `CoverMap - updted 251203.pdf`, `Precinct_100 1.pdf`.

Adopted maps and shapefile (in `2025 Precincts`): `2025 Precincts Shapefile/Election_Precincts.shp` (308 features, EPSG:2277, last edited February 18, 2026), the 308 per-precinct maps in `2025 Precincts PDF Maps`, `Election_Precincts_2025.pdf`, `US_House_Reps.pdf`, `TX_Senate.pdf`, `TX_House_Reps.pdf`, `Commissioners_Court_Precincts.pdf`, `JP_Constable_Precincts.pdf`, `State_Board_Education_District5.pdf`, `2021_Precincts_Changing.csv`, and the pre-adoption `Phase 1 - Splits` (51 maps) and `Phase 2 - Mergers` (29 maps).

Travis County ArcGIS services, `https://taxmaps.traviscountytx.gov/arcgis/rest/services`, read November 8, 2026:

Layer	Records
`Precincts/FeatureServer/0`	308
`AdMas/AdMas/FeatureServer/0`	412,053
`VotingAddresses/VA/FeatureServer/0`	412,016
`UnregisteredAddresses/UnregisteredAddresses/FeatureServer/0`	110,630
`AdMas/Splits/FeatureServer/0`	1,133
`Parcels/FeatureServer/0`	373,683

These are the layers catalogued by the county's Voter Registration Maps hub, `https://voter-registration-maps-traviscountytx.hub.arcgis.com`. The hub's own "GIS Maps and Downloads" page is a JavaScript application and serves no layer list to a plain HTTP request; the catalogue has to be read from the hub's ArcGIS group.

Voter registration lists (in `Voter_Lists/TX_Travis_County`): the county `Registered_Voter_List` exports of October 24 2024, October 25 2025, and January 17, February 10, July 27, August 10, August 24, September 1, September 8, September 14, September 23, September 28, October 5, October 13 and October 20 2026; the TEAM OLRV files `2026-09-16 OFFICIAL-LIST-OF-REGISTERED-VOTERS_115725_1789581206915.csv`, `2026-10-27_G26_journal_gen_voter.csv` (the October 20 pollbook load, provided October 27) and `2026-10-27_G26_Olrv INITIAL .csv` (the initial OLRV); and `p26_olvr_primary_voter_data_rep.csv`.

G26 rosters (in `Voter_Rosters/TX_Travis_County`): `G26-Voter-Rosters_2026-11-04.zip` — the early voting, mail and Election Day rosters, 548,781 rows carrying a VUID and precinct.

Appraisal records: the `Parcels` service above, and `travis_properties_2026.csv` derived from the Travis Central Appraisal District 2026 certified appraisal export in `H:\Library\Government\Travis County Appraisal District\Other Exports`. Individual property research is also available at `https://travis.prodigycad.com/property-search`.

Statutes: Texas Election Code Chapter 42, §§42.001, 42.003, 42.005, 42.0051, 42.006, 42.010, 42.031, 42.032, 42.033 and 42.036, from `https://statutes.capitol.texas.gov`, current through the 89th 2nd Called Legislative Session, 2025.

Reference layers: 2024 Census TIGER/Line `tl_2024_48453_areawater` (118 polygons) and `tl_2024_48453_roads` (21,644 features), used only to name what lies inside a precinct.

Related report: `Travis_County_G26_Voter_Participation_Review_2026-11-05.md`, which raised the unexplained "P99999" value that section 5.6 identifies.

11. Limits of this review

- **The adopted plan is taken as given.** This review checks the data against the map the Commissioners Court adopted. It does not evaluate whether that map is the best available under the constraints, and it reaches no Voting Rights Act question.
- **Address matching is not perfect.** 1,383 voters (0.15%) on the October 20 list could not be matched to the address master, and 1,171 live at addresses that genuinely span precincts; neither group is counted as correct or incorrect. The 97 mismatched addresses were each confirmed independently against the adopted polygon geometry.
- **The OLRV comparison is weaker than the county-list comparison**, because the OLRV gives one free-text address line with no separate unit field. Its 489 flagged voters include an unknown number of dense-housing cases that are not errors; they are offered for the county to confirm rather than counted as established errors.
- **"Wrong ballot" is an inference.** That a voter appears on the G26 roster in a precinct carrying a different congressional or legislative district strongly implies a ballot for the wrong district, but this review has no cast vote records for G26 and cannot confirm the ballot style issued. The G26 cast vote records had not been released when this was written.
- **Parcel-to-precinct assignment uses parcel centroids**, so for precincts narrower than a typical lot — 440 in particular — the parcel count understates what lies inside. Address points, which are placed on the structure, are the better measure there.
- `VoterCount` **in the shapefile is not a current count** and is not relied on here except where section 4.4 says so.
- **The G26 roster counts** in this report come from the roster files' VUID and precinct columns. The limited-ballot rosters list voters by name only, with no VUID or precinct, so limited-ballot voters are not in the per-precinct roster counts.
